50X1-HUM

- About 1 kilometer beyond the village of Zabela on the road from the town of Pozarevac to the Danube River there is an inter-section with a new military road; this road leads into the area of elevation 79, where, during the period since World War II, a supply depot of the Yugoslav River Naval Command has been built. The region is fairly remote, barely visible from the highway, and is closed to civilians.
- There are 5 masonry warehouses, all 25 x 12 meters in size, on the post. There are also 3 underground storage areas, excavated in the hillsides of elevation 79. The dimensions of these underground chambers were not known however, two of them have tunnel entrances, about 4 meters high and 3 - 3.5 meters wide, with metal doors, and the third entrance has a wire door.
- The following items were stored in the masonry sheds: AA machineguns for the river fleet; small caliber arms, of unknown types, also for the river fleet; 82-mm mortars; infantry weapons and automatic arms; and about 30x76-mm AA pieces. The ammunition for these weapons, in adequate quantities and maintained in good condition, was stored in the underground chambers. Mines for blocking the river ports and various types of explosives were also stored underground. Stores of high-octane gasoline, oil and lubricants were stored in the underground magazine with the wire door.

4. It was believed that the complex belonged to the River Naval Command, inasmuch as officers of that service were seen at the installation. These officers came from Kostolac where their headquarters was located. (No details were known about this latter.) A unit of about 20 sailors, who were assigned to guard and maintenance duty, was housed in a small building; they were headed by a sergeant (maresciallo).
